Subject: Application for junior data scientist

Dear Sir/Madam,

I am writing to express my interest in the junior data scientist position at Stedin.

With over twenty years of professional experience across system management, office administration, and application support—now strongly aligned with data science and analytics. I am eager to contribute to a modern, data-driven environment.

I bring a strong foundation in Data Analytics and software programming, along with 8 years in office administration and 3 years in logistics. In previous roles, I worked extensively as a System Manager and application support professional, responsible for the maintenance, troubleshooting, and enhancement of legacy business applications developed in Visual FoxPro. This experience developed a deep understanding of structured data, database-driven systems, and the importance of data integrity, reliability, and process continuity - core principles that directly align with data engineering and analytics.

Since January 2026, I have been actively working in Data Analytics using Python, Pandas, NumPy, and Power BI to transform data into actionable business insights. Alongside my professional experience, I am pursuing a Master's in Data Science, developing practical skills in data wrangling, machine learning, big data processing with PySpark and Databricks, and data visualization using Power BI and Matplotlib. I also work with Azure Data Factory, SQL Server, and web scraping, enabling me to integrate and analyse data across modern business platforms.

I bring a strong foundation in Data Analytics and software programming, supported by experience in office administration and logistics. As a System Manager and application support professional, I maintained and enhanced business applications developed in Visual FoxPro, gaining valuable expertise in structured data, database systems, data integrity, and process optimization—skills that align closely with data engineering and analytics.

I would welcome the opportunity to discuss how my experience and skills can support your team.

In my current role as Manager Systems EDP at Anuradha Enterprises Pvt. Ltd., I have: - Developed and automated financial, sales, and inventory reports using Python, Pandas, Power BI, Excel. - Built dashboards for KPI tracking and business insights. - Enhanced procurement and financial workflows through automation.

My expertise in reporting and analytics enables me to bridge business and technical requirements effectively.

I am particularly interested in opportunities where English-speaking roles are available.

I am also open to opportunities that offer Sponsored Work Permit Visa support and Relocation Assistance, and I am prepared to relocate for the right position.

Thank you for your time and consideration.

Kind regards,

Pradeep Kumar Barolia
